

Product Modifications and Additions

Series 36 Handle Improvements:

Parts List:

- S039S – 5/16-24 Handle rod
- P1268 – Ball knob
- P1305 – 5/16-24 Jam nut
- P1817A – Handle link
- P1938 – Handle linkage boot

Brand Hydraulics has listened to its customers again, and increased the value of the Series 36/38 handle by designing a rubber boot to enclose the handle mechanism. This new handle uses an aluminum extrusion (P1817A) to link the two pivot points. The handle design has been rigorously tested and has only shown minimal wear. This improved handle design replaces our current design and does not increase the cost. It will replace the current design on March 2nd, 2009.

The enclosed handle functions the same as our current design as far as feel, travel, and shifting angle. It provides a cleaner look, keeps out contaminants and protects the spool. Please contact us with any questions on the new design.
